THE REDCLIFF REVIEW

THURSDAY, AUG. 12th 1937

Number 36

Council Met Regular Session Monday Evening

Councillor Hope Appointed As
Deputy Mayor

Town council met in regular session last Monday evening with all members present.

Solicitor Blanshard wrote council asking for settlement of taxes owing by the Roth well. Council decided to refer Mr Blanshard to Judge Carpenter and council reserved the right to make its own claims.

School Board requested \$550 for school purposes. The request was granted.

On motion of councillor Rindahl council approved subject to confirmation by the proper authorities, of the Gundersen Brick & Coal Co. for extension of tax consolidation as set forth in their letter of Aug. 9th.

A motion was passed instituting the secretary to advertise tax consolidation to be adopted again for this year.

Councillor Hope was appointed deputy Mayor for the next 3 months.

The finance committee approved accounts submitted, and motion was passed for payment of same.

Town Clerk, F V Britt was granted holidays commencing August 15th and Mr. Kitchen was appointed to act as clerk.

Councillor Willis had been requested by South end citizens to be requested by South end citizens for improvements on the skating rink at that end. The matter was left over for investigation.

Councillor Rindahl, chairman of the water works committee recommended that Mr. McKay engineer at the pump station, be responsible for and in full charge of supply unit and the hiring and discharging of employees of that department. The recommendation was approved by Council.

A bylaw was introduced appointing Mr. F. Bald as legal retainer for the Council. The bylaw was given its several readings and passed.

Councillor Rindahl suggested that daily Labor tickets be secured as a means of keeping account of the labor in the different departments. Council's Hope moved same be secured.

Mr. J. Allanack spent last week in Brook visiting friends.

Aquatic Sports At Swimming Pool

Good Attendance and Some Fine
Prizes Donated

There was a fairly good attendance at the swimming pool aquatic sports and the crowd enjoyed the events which took part by the young people.

Diving for the pennies by the youngsters opened the program and quite a number took part. Those entering the swimming and diving contests gave a good exhibition and showed big improvement in their skill.

A splendid list of prizes were contributed by merchants from town and Medicine Hat.

The following is a list of the winners in the different events:

Swimming Contests

Girls 8 and under—Marie V in

Wort, Lavina Fitzhenry

Boys—M Byers, R Lepard

Girls 10 and under—D Fitzhenry, G Johnson.

Boys—R Johnson, H Waters

Girls 16 and under—Irene Pearson, Peggie Reid.

Boys—W Hurlbert, S Lehnert

Gents Open—W Hurlbert, B Pearson.

Ladies Open—Irene Pearson, Peggie Reid.

Diving Contest

Girls 8 and under—Dot Lier-

Doris Fitzhenry.

Boys—B Marton, H Ober

Girls 12 and under—D Fitzhenry, L Fitzhenry.

Boys—W Martin, R Johnson

Ladies Open—D Fitzhenry, P Reid.

Gents Open—B Brownlee, W Hurlbert.

Tub Race—A Madsen, D Johnson.

St. Ambrose Sunday School Held Picnic

Was Held at Park on
Wednesday Last

St Ambrose church held their annual parish picnic at Central Park, Medicine Hat last Wednesday afternoon. This year Holy Trinity, Medicine Hat held theirs at the same time. The weather was ideal for the occasion and every one had a marvelous time. Swimming, playing games, racing etc., with plenty of ice cream and refreshments for all. The outing lasted until dusk when everyone returned home tired but happy.

M. Rindahl's Barn Destroyed by Fire

Cause is a Mystery As No One
Known in Building

Last Sunday night about 11:30 fire broke in Mr M Rindahl's barn on his property on Sixth St. and as it was all ablaze before the alarm was sounded the building was burned to the ground.

The cause of the fire is a mystery as there was nothing in the building which would have any reason for starting a blaze.

A lamb and some hens were in the barn but as the door was open they all got out alive.

Fortunately it was a mild night otherwise three residences close to the barn would have been in a very dangerous position.

There was a small insurance on the building but not sufficient to cover the loss.

Institutional Portfolio of Life Insurance

May Be Secured To Inspect At
Review Office

During the past few months there appeared in the Review a number of interesting and instructive cuts of an educational character, stressing the strength and security of the institution of life insurance in Canada, its great value of individual men, women and children in times of financial stress and strain, and its stabilizing effect upon the economic structure of the nation itself.

The Review has a complete portfolio of all the life insurance institutional advertising which appeared in the public press, and any who would like to look it over may secure the copy at this office.

Mrs. S. Straton and Mrs. C. G. Buchholz and their families are holidaying in Derry Lodge at Elkwater Lake.

Plans Made For Feeding Cattle in The Drouth Area

May Get Information From
Address in Calgary

Arrangements have been made by the Dominion Government for the assistance of farmers in the drouth areas of Saskatchewan and Alberta where there is going to be a serious problem of feeding stock during the winter. Plans have been made to move stock to other parts of the Dominion where there is sufficient feeds to finish them for the market.

The Federal Government has arranged with the Western Stock Growers Association to use its office at 28 Michael Building, Calgary, as a source of information for the benefit of both buyer and seller.

It is important that those who are anxious to take advantage of these plans that they list their cattle such as breed, age, sex, estimated weight, horned or dehorned, when delivery can be made, how to reach owner by mail, phone or telegraph.

All the information given from that office is rendered entirely without charge.

In order to encourage farmers and ranchers having surplus feed, to purchase cattle within the drouth area, the Federal Government under certain conditions will refund to the purchaser 50% of the actual freight bill, and in the case of buyers from eastern Canada and British Columbia contributes towards the expense of the buying trip.

Joe Ellison, who attended school at Calgary, received word he had passed successfully all his exams except Art. The latter exam, seemed to have been very difficult, as 52 per cent. in the province failed in that subject.

Joe Jacobsen Paid Flying Visit Here

Is Now Recognized as Expert
Aviator in U S

Joe Jacobsen, who was raised in Redcliff in his boyhood day and who is now a distinguished aviator in the United States flew over Redcliff last week-end and spent a few days with his wife and child and his parents.

While here Joe gave a number of his friends a ride in the air. On several occasions Joe has had some spectacular escapes in race and stunting and now he is recognized as one of the most expert aviators.

While here as a lad Joe was considered an all round athlete and took part in all lines of sport.

Redcliff Hotel Has Opened Dining Room

Board And Room Now At
Reasonable Prices

This week the Redcliff Hotel has opened up the dining room in the future will serve meals in regular hours. The dining room has been completely renovated and is now in a nicely decorated condition with splendid accommodation for a number of guests.

Mrs. Rosser who has had considerable experience in this line will be in charge of the dining room in future. Arrangements have been made for accommodation of both board and rooms at very reasonable prices.

Miss Carol Sellhorn is visiting in Calgary with Mr and Mrs. Wooding.

Ralph Hargrave and Douglas Leeming, who attended Medicine Hat high school, received the result of their exams. Both passed in all subjects on which they had written. Ralph got honors in several subjects.

Fourth Cabinet Minister Forced His Resignation

Attorney General Hugill Now
Out of Cabinet

Another Cabinet Minister in the Aberhart government has been asked for his resignation. This time it is Hon. J W Hugill, who has been the attorney-general ever since Aberhart formed his government.

The reason Mr Hugill was asked for his resignation is because he gave the Premier, an honest opinion on the new tank-licensing measure. It is quite evident that Mr Hugill after consulting other legal advice and carefully studying the B N A Act, was of the opinion that the legislation introduced in the recent session, was unconstitutional.

Evidently Premier Aberhart was more willing to take advice from foreign laymen than from experienced constitutional lawyers.

Mr Hugill is the fourth cabinet minister whom the Premier has forced to resign on account of having opinions of their own of having opinions of their own of agriculture, C C Ross, minister of lands and mines and C Cockcroft, provincial treasurer.

Young Redcliff Couple Married June 24th

Nellian—Pederson

On Sunday July 24th a popular young couple of Redcliff were married in Medicine Hat when Miss Carol Pederson was united in wedlock to Mr. K. Neilson. The young couple left on a wedding trip by car and on their return will reside in their new home on Sixth St., which the groom purchased lately.

Mr. Joseph Leonard, a pioneer of Medicine Hat, who was well known in Redcliff, passed away last Friday after a lengthy illness.

Churches

GORDON MEMORIAL UNITED CHURCH

Rev H V HEMM, Pastor
Sunday, August 15th
Church School at 10 a.m.
11:15 a.m. Morning Worship
In the absence of the minister Mr James Brown will take the service.
No evening service.

ST MARY'S CHURCH

Commencing next Sunday the service will be held at 9 a.m. The following Sunday at 10 a.m. In future service will be held at these hours on each other week, these hours on each other week.

ST. AMBROSCH CHURCH

Rev H. S. Hammett, Vicar
Holy Communion 1st, 2nd and 4th Sundays at 8 a.m. and with 4th Sunday 1st A Corporate Communion

8rd Sunday at 11:00 a.m.
Evening 7:30 p.m. 1st 2nd and 4th.

Redcliff Hotel Dining Room is Now Open

Meals, Room and Board
At Reasonable Rates

Special Chicken Dinner
For Sunday

New \$3,300,000 Ford Plant Creates Employment

LOOKING along the partially completed west side of the \$3,300,000 Ford Motor Manufacturing Plant now being constructed by Ford Motor Company of Canada, Limited at Windsor, Ontario, during last March, the new building will be completed this fall and will provide 15,000 square feet of floor space for the manufacture of V-8 engines and a new home for the final assembly line which is now located in the machine shop. The new plant will cover nearly 14 acres, cover one end and is 1,000 feet long by 371 feet wide, slightly smaller but of a type similar to the big machine shop. The two buildings will be connected by a railway under the lines

Terminated Railway tracks. Many men have been working all summer on the job, employed by the Canadian contracting firms which are completing the plant. The photograph shows the building at work on the north wall of the west wing; a gantry crane supporting concrete slabs above the site is in the west wall and other men are busy about the construction lot. At the same time the machine shop roof is being put on slabs are being placed in the roof structure and the concrete floors are being laid by a paving machine. This new body manufacturing building is part of the \$3,000,000 expansion program being carried out by Ford of Canada this year.

Government By Commission

It is not perhaps surprising that organizations and individuals are inclined to look askance at what has been termed the "raising tide of bureaucracy" as represented by the growing tendency to hand over the reins of governmental administration to appointed boards and commissions.

That there is a growing trend in this direction, both in the Federal and provincial arenas in Canada need not be gainsaid. The evidence is palpable. One only has to look around one's community, for proof that a multiplicity of boards and commissions are at work performing, in some cases the functions of governments, and in others, the duties formerly delegated to the courts. And the tendency is toward increased growth of administration in this form.

Apart from the question of expediency, there are, of course, serious arguments advanced in support of the positive suggestion by appointed commissions and boards and some of these arguments are not without foundation. For instance, it is urged with a good deal of truth that demands by the people upon their governments for extension of existing services and new services is increasing all the time, and that these services can be rendered with greater expedition and more efficiency by boards set up for the purpose than by governmental departments.

The argument cannot very well be refuted, but the question which the people have to face is whether or not they are willing to surrender a good many privileges, such as the principle of governmental responsibility to the electorate, the right of appeal against decisions and the right to know what is going on, for the sake of speed and perhaps greater efficiency.

That these privileges—or should one call them rights—are impaired and threatened to an increasing degree with the multiplication of administrative boards and commissions was recognized at the recent convention of the Law Society of Saskatchewan, when delegates appointed a committee report pointing out the loss of the principle of accountability by commission and decided that the committee continue its work and further, supported a proposal that a program of education which would bring the facts and the problem to the attention of the public be conducted.

One of the chief arguments of the committee in support of its position is the fact that arbitrary powers are usually vested in organizations which are not directly responsible to the electorate and very often there is no appeal to the courts from the dicta and rulings of these bodies. In other words, the individual, deprived of recourse to the courts in which he has every confidence, has no power to obtain redress. That is to say, one of the fundamental rights of the individual is being sacrificed to the extent that the fact that reasons for decisions are not usually given. Under these circumstances, it is not surprising that the committee decided that "the comparative secrecy of the hearing tends to destroy confidence."

When rulings and decisions, binding upon the public, are given behind closed doors and without any accompanying reason therefor, it is to be expected that public confidence in tribunals that carry on their work in this manner will not be very strong.

On the other hand it may well be pointed out that frequently enough the wheels of justice operating through the established channels of the law courts travel slowly and that the delay in the trial of cases, the expense, the often felt unnecessary expense, possibly because of slow motion and the necessity of traversing a road bordered by a good deal of red tape.

No one in this country, considering the delay in the trial of cases, the expense, the often felt unnecessary expense, possibly because of slow motion and the necessity of traversing a road bordered by a good deal of red tape.

For Green Pastures

Much Attention Being Devoted The World Over To Grassland Problems

Although during the present generation, wheat has held the stage in the public eye as the most spectacular agricultural crop, there is a much older and important crop on which agriculture itself was founded in the dawn of civilization. This is the grassland or pasture crop. For many years, it was relegated into the background and agricultural science came to its aid by adding much to human knowledge (and profit to the farmer) in relation to grassland, its creation, management and fertilization.

Never before has there been so much interest all over the world in grassland problems, or so much attention devoted to research work along the lines of plant breeding to improve the different forage grasses and legumes, the nutritive value of the various forage crops in livestock feeding, the improvement of grassland by the use of fertilizers, pasture management and the study of the best seed mixtures for hay and pasture purposes.

Recently scientists of the Dominion, Ontario, and Quebec Departments of Agriculture, together with those of the various agricultural colleges, held a two-day session of the Dominion-Provincial Pasture Conference at the Central Experimental Farm, Ottawa, where the various phases of cultivation and utilization of pasture lands were discussed, and this morning's session was devoted to the world's Fourth International Grassland Conference, the Western Canadian Breeding Station at Aberystwyth, Wales, chosen because the work accomplished there is internationally recognized.

It is expected much benefit to all countries will be derived from the discussions during the meetings. Canada will be represented by Dr. L. E. Kirk, the Dominion Agronomist, who will deliver the plenary paper for the morning session, entitled "The Value of Some Species of Grasses and Legumes for Pasture in Canadian Conditions." The only other Canadian representative, Dr. MacKenzie of the Canadian Research Council, will give a paper "Nutritional Aspects of the Crop Production in Eastern Canada."

Investigate Arctic Regions

Canadian, U.S. and British Scientists To Conduct Studies

United States and British scientists will conduct investigations in the Canadian Arctic region, Dr. Charles C. MacKenzie, commissioner of the Northwest Territories council, announced names of scientists and explorers granted licenses to go to the Arctic within the Territories.

The Canadian government is sending a party to the Arctic region, led by Dr. Charles C. MacKenzie, commissioner of the Northwest Territories council, announced names of scientists and explorers granted licenses to go to the Arctic within the Territories.

New Secret Of Longevity

Brigadier-General Says War Suspenders To Keep Fit

It is pleasing to find a variation in the prescriptions for good health at great age. Too much they have been limited to long walks, total abstinence, regular drinking and the like. Brigadier-General Samuel E. Tilden, who will be 90 in October, astonished the ship news reporters the other day by attributing his first name to his secret, not his age.

There is much to say for the Tilden theory. Suspenders may be ugly, while belts are aesthetically, but the old-fashioned put the weight of the breeches on the shoulders and not on the hips. Put a belt on a man and he will automatically thrust his hands into his pockets and keep the leather on the shoulders.

There is much to say for the Tilden theory. Suspenders may be ugly, while belts are aesthetically, but the old-fashioned put the weight of the breeches on the shoulders and not on the hips. Better Commission Programs

Extension Of Programs Period Forecast In Announcement

Extension of the daily programme period to 12 and possibly to 16 hours in October when the new high power transmitters in Ontario, Quebec and British Columbia will go into action, the Canadian Broadcasting Corporation, following a meeting of regional directors and programme directors.

Grand opera concerts from United States will be continued, the general manager said, but it was felt that Canadian light opera talent elected to a sufficient degree to warrant formation of two companies which will give a series of 26 concerts, 13 from Montreal and 13 from Toronto.

Historical dramatizations and sketches based upon the activities of the Royal Canadian Mounted Police and other features representing Canadian life, will be presented, with musical programmes originating in provincial cities from coast to coast.

Of interest to western Canada was Major Murray's announcement that United States programmes will be brought in from Pacific coast stations to avoid the time inconvenience to western listeners when these broadcasts are brought in from eastern stations.

Has World's Finest Service

Scotland Yard Able To Trace Fingerprints Within Five Minutes

Scotland Yard men will have the most service of criminal records and fingerprints in the world, when the extension to its building at Westminster is completed. The Yard, "Who's Who in Crime" will incorporate the latest mechanical system of card-indexing finger prints. At present the Yard's library contains 5,000,000 prints, or more than 600,000 sets.

The appointment of Chief Inspector George Blackburn, of the West Riding police, as "adviser for the development of police records," is a link in a scheme to put the entire police records of the country at the disposal of any force when needed.

The present fingerprint classification system is as complete as the criminal record of a suspect can be produced within five minutes of the receipt of the print. A similar system will be built up among provincial forces.

Relief Funds

A Little Bit Of Reason Is Necessary In All Things

There are still thousands of suffering people in need of relief. It would also look as if there are still some others who are imposing on the taxpayers.

A case that appeared before the court in the latter category was revealed in police court. A Toronto resident was sentenced to seven days and had his driving permit cancelled on a reckless driving charge.

Better Distribution Of Pure Seed Grain Needed To Assist Farmers

Although he recognized the value of purity in cereal seed, Hon. J. G. Taggart, minister of agriculture for Saskatchewan, remarked more of the Canadian Seed Growers' Association at their annual convention at Saskatoon, that there were "other factors to be considered in the production of wheat."

Raising the standard of the whole Canadian wheat crop was a laudable objective, but one could not expect that the majority of farmers could become seed growers overnight. It must be remembered that there were few farmers capable of becoming seed growers, the minister said, and he believed that this was a good thing. "The production of pure strains in wheat must be placed in competent hands," he asserted.

Because the great majority of farmers were not seed growers, it was in the interest of members of the C.S.G.A. to conduct work which would improve commercial wheat. Mr. Taggart declared, "The policy of holding new varieties until they were absolutely pure and ready for registration, and of keeping the registers of that registered seed also pure, would not aid the commercial farmer materially."

"You must remember that the commercial farmer is the backbone of this country. If he fails, you, too, fail." The primary motive of the commercial farmer was to make money, and the seed growers could aid him in this by placing the restrictions placed on the distribution of good seed grain.

This objective, Mr. Taggart believed, could be attained through use of the seed exchange plan, which provided that farmers could receive registered or certified seed wheat, seed it and distribute the harvest, or part of it, to his neighbor farmer.

In his opinion, the seed exchange practical plan whereby the purity and standard of the commercial crop could be raised, he said.

Mr. Taggart suggested two factors which seed growers should bear in mind. (1) That seed growing should be confined to experts, and (2) that some intermediary steps, resulting in multiplication of the seed produced, must be devised to guard purity and to supply the commercial farmer.

"I believe that in this manner the whole standard of the wheat produced in this country could be raised, at little cost," the minister of agriculture asserted.

Close inspection of grain would also be unnecessary if the seed exchange plan was used. The inspection of grain could be carried out according to the commercial farmer's viewpoint.

Good Polishing Agent

Vinegar Can Be Used In Great Variety Of Ways

Dull brass may be quickly cleaned by rubbing it with a piece of rag dipped in vinegar mixed with a little salt. Leave it for a few minutes then wash off with warm water. Dry well and polish.

To give light or dark paint a good gloss, use equal quantities of vinegar and paraffin. Apply this with a soft cloth and polish with a duster.

Varnish may be cleaned with a champagne leather dipped in vinegar and cold water.

To clean a varnished glass that has not been used for some time, crush an egg shell finely and rub it into the glass with some vinegar. Put in the glass, shake well and rinse with warm water.

Stains in flower vases or decanters may be removed by soaking them in warm water containing vinegar and salt. Shake them occasionally and rinse well in cold water.

Dark woollens will keep their colors better if they are washed in warm soap water containing a little vinegar.

No Time For Holidays

Although 73 years old, Dr. Frank M. Chapman, ornithologist of the American Museum of Natural History, has no time for vacations. "The greatest hardship you could give a naturalist would be to prevent him from pursuing his calling," he said an interviewer.

An Interesting Product

Tar is one of the most interesting products of soft coal. From coal, six crude products are obtained, and about 100 secondary products can be made from these. And from the 200, about 1,300 finished products are prepared.

The Mississippi river carries 600,000,000 tons of mud into the Gulf of Mexico every year.

Believes In Luck Charm

English Woman Sure Mummified Foot Brings Good Fortune

"Pharos's curse" is a lot of nonsense. It has never brought me anything but good luck." Mrs. J. E. Bray, aged 63, Bristol, who made this statement, has for more than 30 years had in her possession what is believed to be the mummified foot of an Egyptian princess which came from a royal tomb in the Sahara Desert.

"The foot is a strange little thing; it is about six inches long, still in perfect condition, and shining like polished brass," Mrs. Bray said.

"It was given to my husband by a friend who took part in an excavating expedition in 1906, and ever since then it has acted like a charm," she said. "It has brought me health and happiness."

"Before I had the foot I had been ill for 15 years. No doctor could make me well with wrong with me."

"My husband and I decided that 'Pharos's curse' could not make me more ill than I already was, so I held the foot in my left hand and wished for health again."

"It was amazing. In less than a month I was perfectly well and I have never been ill since. Now, at 63, I feel so well that I could knock the world over."

"Whenever I am in a difficulty I just hold the foot in my left hand and wish. Things are right again in no time, and it works almost as well for my friends, though I allow only a few favorites to touch it."

"To give you an example, During the war we lived on the edge of Kensington Park. One night an air-raid started, and I was awakened and I sat in the drawing room feeling very frightened and praying for our safety. He told me to fetch the princess's foot, which I did, and held it in my hand throughout the raid."

"A bomb fell in the park. The windows of every house in the street were smashed. But our house remained untouched."

"When my husband died seven years ago, things began to go badly for me. I lost all my money and was almost ruined. I took to carrying the foot about with me, and all at once I was in the lap of fortune again."

Talk Hearing Completion

Work Nearing Way Dead Will Require Two More Years

The book of remembrance to commemorate the Canadian soldiers who died in the Great War will require nearly two years more before it is completed, according to defence headquarters officials at Ottawa. When finished the book will contain 66,000 names.

This includes 53,450 members of the Canadian expeditionary force who were killed, or died from war causes, by June 30, 1914, and April 30, 1922. The latter date marks the final demobilization of the last members of the C.E.F.

The other 12,550 names are of Canadians who died from war causes while serving with the British and allied forces. All Canadians who have died, or who may subsequently die, from war causes since April 30, 1922, will be commemorated in a "Page Without Names."

Really Settled

The chief of the clan Macnab was at dinner in a Highland inn, where he expected to be asked to sit at the head of the table. The notion of an other clan, however, was also one of the company, and insisted on taking the chief's place. None of the guests present began excitedly to assert the superior right of one or the other, Macnab took another seat, remarking with cheerful pride:

"Gentlemen, sit down where you please. But wherever the Macnabs sit, that's the head of the table."

Antelope Fur Cypres Hills

A herd of 30 antelope, presented to the Saskatchewan Government from the park at Watrous, Alberta, have recently been shipped into the province. These antelope are now making their home in the Cypress Hills Park.

A Valued Customer

Canada has a valued customer in Latvia, a Republic with two million inhabitants created in 1918 out of a bit of Russia, on the Baltic. Last year the Latvia spent more than \$40,000 here, mostly for copper.

There are about 5,500 British road the shores of Great Britain, including five hundred in the Highlands group. 2219

THE REVIEW, REDCLIFF, ALBERTA

BITSY THE GIANT-REELER

No one expected "Bitsy" Grant, diminutive United States lawn tennis star to win his two single matches in the Davis Cup series against Australia, but he did just that. None of Uncle Sam's experts would predict that Bitsy will win the British singles title at Wimbledon, but Bitsy is a giant-killer and "he may" become the new titleholder.

Likes His Mountain Home

Hilfer Spends Most Of His Time In Bavarian Alps

If and when Premier Mussolini, flying across the Alps, visits Chancellor Hitler, he will be entertained in a mountain home that for beauty of setting and artistic content has few equals in Germany.

"Haus Wachenfeld," five miles above the upper Bavarian Alps of Berchtesgaden, now is much more the executive mansion than the Reich's Chancellery in the Berlin Wilhelmstrasse or the "house of the Reich's president a few doors north."

Hilfer spends more of his time in his home on the "Berghof" than he does in Berlin. He loves the solitude of the mountains.

Hitler has enlarged the house considerably. The roof is heavy and steepled. The veranda of the second story has been converted into a series of loggia with wide arches resting on massive pillars.

Heavy oak beams and exquisite paneling under the great hall on the main floor a thing of beauty. From his windows there is a fine view of the Bavarian Alps. A costly gable tapestry and carefully-selected paintings adorn its walls. A grand piano stands in a corner.

In A Different Setting

Reverend Croasley Hunter took men of widely divergent views to a camp in Muskoka and after a few days' stay announced that they could live happily together. Maybe so. But wasn't the setting just a little unusual? When back in the ordinary turmoil of life with its competition, intrigue, ambition and struggle, the single instant asserts itself over more and more man again becomes the perfect beast.—Farmer's Advocate.

Orange oil, made from oranges unsuitable for export, is being produced in Brazil.

Values His Dog

Animal Saved Vancouver Man When Horse Fell On Him

Bert Pritchard said he "couldn't" take \$500 for the Alston dog, a dog he had owned for three years ago. The dog, Silver, saved James Cook, former Calgary resident, from possible death under a 1,600-pound Clydesdale horse which slipped and fell on him as he was clearing property in West Vancouver.

Silver nipped the horse on the flanks and nose when it failed to answer Cook's frantic shouts to stand up. The horse turned the trick.

Pritchard said the dog previously had located a lost person, and once stood guard over an injured child until help came.

Would Mean Greater Safety

New Inner Tube Prevents Blowouts When Blowout Occurs

The life-guard tube, a new development in automobile inner tubes, which the owners claim will put a curb on servicing caused by blowouts, was demonstrated at Yonkers, New York.

This new device is a tube within a tube. When a blowout occurs, the air escapes from the outer tube, but a tiny vent in the inner tube prolongs the deflating of the tire, preventing a complete escape of the road. This gives the driver ample time to bring the automobile to a stop and fix things up.

We simply must get hold of that 1,000-word novel which hasn't a single "n" in it. We can hardly wait to read how the hero "licks his first nurse and said: 'Dank, will you be mine?'"

The fan attained the greatest popularity in the United States during the latter half of the 19th century.

Years of Wear in Crocheted Lace

Household Arts by Alice Brooks

People are cultured nowadays, says a veteran dealer of dress suits in New York.

"Clerks, stenographers, even newspaper men to-day get married or go to parties in tails," the dealer said. "Would you believe it, lately a lot of nice looking fellows came into my shop to rent dress suits for a wedding. Two days later the suits came back in fine shape. Not a spot on them. They were the best I have seen of longhairs who'd been to an other longhairs' wedding!" he concluded.

String and Quickly Learned Medallion Make Choice Accessories

PATTERN 5569

Simple stitches—no easy matter—"striking motif" make a bedspread that is unusual in its rich beauty. Its durability makes it something to be proud of. Use it to dress up your own bedroom or add a luxurious note to your guest room. You can make a lovely matching scarf, using the same pattern. In pattern 5569 you will find complete instructions for making the medallion shown; an illustration of it and of all the stitches used; material requirements; a list of the stitches used; and a list of the stitches used. To obtain this pattern send 25 cents in stamps or coin (coin preferred) to: Household Arts, The Review, Redcliff, Alberta, 173 McMichael Ave. E., Winnipeg.

Physician Gives Explanation Of The Causation Of Dreams And Their Interpretations

Would Make A Difference

Slow Thinking Children Do Better In Group By Themselves

It is rapidly being forced on the attention of educators that school children must be separated into two classes. The backward children become more backward when thrown into the same classes with the bright ones, and of necessity the bright ones are held back by the others.

Child psychologists tell us that if we were thrown into a group of supermen, we would feel so inferior to them that we would not only become dumb in their presence, but would be permanently discouraged because of the contrast.

If this be true of a nature person, how much more is it true of an inferior child? The child is infinitely more sensitive than the grown person, and much more easily discouraged and discouraged.

Many children constantly crying are not inconvertible at all, but simply discouraged with life and trying to wreak their vengeance on the group who seem to refuse to understand them.

The fact is it is discovered that a child is a bit slow, and the sooner he is taken out of the class with the average and placed in a group of children of his own mental level, the better for his mental aspect.

We are learning that it is no disgrace to be slow in school. It is rare indeed that a child is stupid, and makes any large financial endowment to his alma mater. The money making faculty and the ability to succeed the scholastic heights are individual qualities, and some children are not equally well in a rounded world.

It is a slow child into a class of his equals, and you will soon relieve him of his inferiority complex and enable him to live a normal and happy life.—Kansas Magazine.

Asked Patrons To Help

French Railway Improved Service By Acting On Suggestions

Practical and direct co-operation between the Eastern railway of France and the travelling public, has brought scores of helpful suggestions, and the experience of the railway officials and the passengers did both—in cash and in kind.

"Help us to run the railway upon your terms," was, in effect, the invitation extended by the French railway, which, as the name indicates, serves eastern France, and the response was prompt, voluminous and frank.

"Tell us what is wrong," said the rail officials, "but tell us what is wrong," and the passengers did both—in cash and in kind.

More than 400,000 pamphlets, inviting suggestions have been distributed since the first of the year by the "Bat" railway.

To provide the opinion of its passengers, the railway also placed 50 suggestion boxes in the various stations, Paris, Marseilles, Lyons, Bordeaux, and the daily return, so far, has never dropped below 50. Generally, it was near the 100 mark.

That distinguished the suggestions was, in the most part, they were constructive, and suggested practical means for improving the service.

In Great Demand

New York Dealer Of Dress Suits Reports Business Good

People are cultured nowadays, says a veteran dealer of dress suits in New York.

"Clerks, stenographers, even newspaper men to-day get married or go to parties in tails," the dealer said. "Would you believe it, lately a lot of nice looking fellows came into my shop to rent dress suits for a wedding. Two days later the suits came back in fine shape. Not a spot on them. They were the best I have seen of longhairs who'd been to an other longhairs' wedding!" he concluded.

That distinguished the suggestions was, in the most part, they were constructive, and suggested practical means for improving the service.

What Price Dreamer

Frederick H. of Prussia once killed a 60-pound stag and gave the antlers to his minister. They came into the possession of Frederick William, who passed them to the King of Saxony for a regiment of 500-foot grenadiers.

Two kinds of trees, Litha spruce and Alpine hemlock, make up 70 per cent of the timber growth of Alaska.

Large government expenditures continue to increase industrial activity in Mexico.

Drought Problems

Extensive Study Of Land Being Made In Alberta And Saskatchewan

An extensive study of land problems, particularly in the drought areas of Saskatchewan and Alberta, is being carried out by the Economic Branch of the Dominion Department of Agriculture in co-operation with the Universities of these two provinces. The funds for this extensive survey are largely provided under the provisions of the Prairie Farm Rehabilitation Act, and during the present year it is expected that 14 municipalities will be surveyed in the Province of Saskatchewan, and probably 12 in the province of Alberta.

These studies are being carried on for the purpose of providing data upon which a policy with respect to the use of land in these provinces may be based. The land will, in the first place, be classified as "non-arable" and "arable," of which there may be several grades. Such an inventory of land resources is essential in the determination of policies with respect to crop production, live stock production, taxation policies, rearing systems, extension of credit or even school policies, settlement and resettlement and the organization of farms on a basis of the needs of the farmers to operate more successfully.

By the end of 1937, twenty-eight municipalities in the drought area of Saskatchewan will have been surveyed and almost as large an area will have been covered in Alberta. These studies are part of the research program of the Dominion Government in respect to drought problems in the Western Provinces. In part, secured through the co-operation of farmers and in part from the municipal governments, the data available in provincial Departments.

Advisory committees have been set up in each province, the members of which are officers of the Dominion and Provincial Departments of Agriculture and the Universities.

Interesting Zoo Collection

Canadian Species Of Wild Life Seen In Quebec Gardens

A thousand wild creatures, representing 96 Canadian species and forming one of the most interesting zoological collections by any one collector, have been gathered together in the new and picturesque Quebec Zoological Gardens at Montmorency, Charlevoix, about 15 miles from the provincial capital. One or more of almost every animal, which are found in Canada, can be seen there from polar bears to porcupines, pelicans to porcupines, salmon to snakes. One of the greatest difficulties experienced by the director and his staff was in the proper feeding of mountain sheep and moose whose food requirements increased with the seasons. Finally a diet of marsh hay, a mixture of grains and alfalfa, and phosphated salt was found rich and bone alkaline was found.

The Quebec Zoo occupies at the present time 30 of a site of 75 acres which has been secured by a Barinologist as one of the finest of its kind in the world.

May Settle In London

Mc-Kay's Youngest Grandson Now Studying In France

Prince Friedrich of Prussia, the youngest grandson of the ex-Kaiser, who attended the Coronation as a guest of the King and Queen, has left England.

Of all the Hohenzollerns he is the one who knows post-war England best and he has made many friends there during his various visits. After visiting his grandfather at Down, and giving him an eye-witness account of the coronation, he is going to Geneva for two or three months to perfect his French.

He will live with a French family and have a private tutor who has already passed his law examination, his education will then be finished. In the autumn he hopes to return to England and may take a business appointment in London.

Is Slightly Incurable

Dr. H. Spencer Jones, the astronomer royal, reports that Big Ben, the huge clock dominating the parliament buildings, does not keep perfect time. On five days in the year ended April 30 the clock was more than a second out. On 49 days it was between one-half and one second wrong.

Fred Barnes, aged 68, who had never learned to swim during his 28 years as coxswain of the British Royal Lifeboat crew, was rescued recently by the lifeboat when his fishing boat capsized.

A 213-ton locomotive for Algeria which can pull a 400-ton train at 30 m.p.h. and is claimed as the most powerful in the world, finished its trials in Paris.

SCRAP METAL COMES INTO ITS OWN AS PRICES SOAR

High prices for scrap metal mean money in the pockets of Western Canadian farmers, and scenes such as these are common, as yard and shed are being cleared of old machinery to be sold as junk. This strange old steam engine on a railway platform at Drinkwater, Saskatchewan, is awaiting shipment to the mills to be broken up.

Everyone Treated Alike

No Respect Of Person In British Law Courts

From time to time examples of British penalties on reckless or drunken drivers have been cited, on punishment amounting to fines of hundreds of dollars and suspension of driving license for years or even for life. A new angle was given to the subject the other day in the case of Freddie Dixon.

Dixon is the greatest racing driver in Britain to-day. He has won more races at higher speeds than any other motorist in the country. At the present time he is building a new type of car with which he not only expects to beat Sir Malcolm Campbell's record of 300 miles per hour, but which, he says, will revolutionize the design of automobile engines.

If he intends to try he will have to delay the attempt for at least two years. Few days ago he reverted to the wrong side of a road, bumped into another car and drove on without stopping. For this escapade he was fined £200 and his driving license was suspended for two years.

Had this incident taken place in Canada he would probably have been fined \$25 and to take more care. If he had taken place in the United States his lawyer would probably have put up a great plea about what a hero he was in the eyes of every good American in winning so many races on the track, and he would have been bowed out of the court with a smile.

But the British law is no respecter of persons. Even the great Kaye Dixon was sent to prison when his mechanic was killed by being thrown out of a car in which Dixon was practicing for a contest—St. Thomas Times-Journal.

Might Try Chinese Way

Orleans Think American Way Of Cooking Chick Is Barbarous

An expert writes that the Chinese way of roasting a chicken is so barbarous that it is not worth the trouble of trying it. The expert writes that the Chinese way of roasting a chicken is so barbarous that it is not worth the trouble of trying it. The expert writes that the Chinese way of roasting a chicken is so barbarous that it is not worth the trouble of trying it.

Last Rite Was Fitting

ashes Of British Airman Scattered Over English Channel

For a giant flying boat that he helped develop, the ashes of Sir Eric Bristow were scattered over the English Channel by the Canadian navy from England about its business flying the empire air routes, when the chairman of Imperial Airways Company died. The body was cremated and the ashes finally floated gently on the waters of the channel before being fed for enemy shipping during the great war when, as first lord of the admiralty, he played a major part in defeating Germany's plan of starving the United Kingdom by torpedoing food ships.

Saskatchewan Gold

A gold brick weighing 90 ounces valued at \$3,000 has been secured by prospectors of the Mount St. Helens, west of Amisk Lake, in Northern Saskatchewan. The brick represents a mine run of only 10 days. The \$300,000 will now be in operation on the property, commenced operations shortly after the new year. 219

Editor Was Appreciated

Had To Go Away On A Fishing Trip To Discover This Fact

Practically every week I receive at least a score of letters of appreciation from readers of this magazine. They do help me wonderfully to keep up the pace.

Quite a few are so highly valued that I do not throw them away. In my study I have a pile of them a foot high.

I am not at all like a poor editor of a weekly paper in a small town in Canada—a man whom I knew years ago.

No one ever praised his paper. He did it best to make it useful and interesting, but no one said to appreciate work to him.

One week he felt so discouraged that he wrote off on a fishing trip. He did not publish a paper at all that week. "Nobody values it, so what's the use of keeping it up?" he said.

He was given a value of his paper, they said.

He was given a word of praise and appreciation and he joyfully went on with the work of publishing it—Efficiency Magazine.

Resumes Plane Building

Coast Plant Has Received Contract From Canadian Government

Resumption of plane manufacturing at Vancouver, B.C., after a lapse of five years was announced at Seattle, Wash., by the Boeing Aircraft Co. of Canada, Ltd.

A contract for construction of 11 planes of the Blackhawk "Bark" type for the Canadian government was revealed with the announcement of the reopening of the plant for aircraft manufacture.

Recently the plant had been engaged chiefly in construction and repair of motor boats.

The government contract represents part of a \$35,000,000 Canadian national defense program.

Forest Training School

Upwards of 300 young British Columbian men have again disappeared into the forests to learn what goes into the making of B.C.'s great fifty million a year logging and lumbering industry. Inaugurated three years ago, the training plan young unemployed has been instrumental in placing large numbers in jobs.

Dreammaking exhibits are a feature of the Paris Exhibition.

The wolfina is the smallest of all flowering plants.

Argentina is seeking to attain self-sufficiency in finished chemicals.

"All right, go home to mother, then!"

—Smith's Weekly, Sydney, Australia.

Population Increases Slowly

Rate Of Increase On Frontier And Other Regions Is Lagging

Recent trends of population in Canada indicate that there is a slowing down of the rate of increase of the provinces and in other regions of the country. It has been estimated that for the present decade there may be a surplus of 300,000 persons in rural communities without adequate occupational opportunities.

Dr. C. Dawson, professor of sociology at McGill University, told members of the Canadian Society of Agricultural Economics in a paper delivered at their convention in Saskatoon. He further suggested that there was a large surplus population coming of age in the industrial areas which must be taken into consideration in discussions of immigration policies.

He was followed by Dr. W. W. Benson, professor of economics, University of Saskatchewan, whose view was that there were still great opportunities for immigration, that the industrial development of Canada is a slow thing (transportation system and the presence of large numbers of unemployed white collar workers demanded an early expansion of primary production to create employment for those out of work and to still the general capital attraction of the country to its fullest possible extent.

Other delegates to the convention expressed opinions concerning the question of immigration which were under discussion.

Delegates from the Maritimes and from Ontario expressed the opinion that there were numerous agricultural opportunities for ambitious young men in their parts of the country.

Salvage Lost Tackle

Boys At North Bay Did Not Have To Be Any

The exasperated angler who annually loses a dozen or so spoons and plugs (artificial bait) on Lake Umbagog's rocky bottom, might solve his problem of "when the plugs go in the summer time" by interviewing North Bay boys.

The device may be seen drifting in boats near the shore, with weather eyes bent downward, jabbing the bottom of the lake with a long pole, armed with a hook on one end to disengage and bring fishing tackle and crabs and crabs beneath the water.

When the temperature of the water permits, the boys dive for their own, and retrieve a greater haul than might be expected for a lot of fish here are lost yearly in Nipissing.

The fishermen all the recovered baits for whatever they may bring, but some use them to stock their own fishing tackle box.

"Sure, we get lots of them every year," said a minkov farmer. "In the season we get nearly 100,000 except for fishing lines, we haven't bought any tackle for years. Good old Lake Nipissing! We get our livelihood from its waters, and our tackle from its stones!"

Worth The Money

Specialized Workmanship Goes Into Building Of Even Smallest Boat

It is difficult if there is any other article manufactured from wood in which the purchaser gets the same amount of specialized workmanship and selected materials for the price paid as he does in buying a boat. Look at the hundreds of fastenings, each requiring a hole to be drilled, a nail to be set, driven and clinched, the many pieces of planking that have to be tapered to a pattern, nailed on the edges, fitted and fastened in place; see the various parts that have to be cut to size, and fitted in place; consider the sanding, oiling and varnishing necessary to produce the fine finish.

Consider the quality of the lumber, and the amount that must be rejected if only the choice pieces are to be used. Think the fact that the lumber has to be secured a long time in advance so as to be properly seasoned. Consider also that the fastenings and other materials are practically all special items for boat construction.

Quebec Has Big Surplus

Hon. Martin B. Fisher, provincial treasurer, said the financial statement of the province of Quebec for the current year, ending June 30, would show a surplus of approximately \$5,000,000, compared to a deficit of \$2,000,000 shown last year.

Makes Extra Revolution

Because of the entire daily journey in its orbit around the sun, it must spin on its axis a little more than one complete revolution before the same place on its surface arrives again beneath the vertical rays of the sun. Thus, during one year, one extra revolution is made.

To Maintain Peace

Peace Officers Instead Of War Officers Is Suggestion Made

If nations had Peace Officers instead of War Officers, it would be much easier to retain friendly arrangements, and it would be much easier to solve international disputes and commercial rivalry. In effect, a new spirit would be created—the spirit of co-operation for the well-being of all nations.

Peace, as Mr. Hambro (President of the Norwegian Parliament) has pointed out, "is a state of national mind; it is a plan of national living, not passive inaction."

Perhaps no one has thought of the present position in quite the same way as Mr. Hambro. He remarks that "you will find in every country in Europe and America a War Office, but no government until now has had a Peace Office—a department studying the possibilities of future conflict, trying to neutralize them before they are born, studying the ways in which the friendly relations among the nations that will promote international sympathies."

Perhaps no one has thought of the present position in quite the same way as Mr. Hambro. He remarks that "you will find in every country in Europe and America a War Office, but no government until now has had a Peace Office—a department studying the possibilities of future conflict, trying to neutralize them before they are born, studying the ways in which the friendly relations among the nations that will promote international sympathies."

See Lion Good Climber

Has Been Giving Demonstration Of Skill At London Zoo

The lion destined for the Moscow Zoo, and since they were only temporary boarders they were not properly trained for the Moscow Zoo, and since they were only temporary boarders they were not properly trained for the Moscow Zoo, and since they were only temporary boarders they were not properly trained for the Moscow Zoo.

The escape was effected by climbing a four-foot wall on to a low roof, hammering through over a two-foot fence, and then dropping over six feet on to the path, then a fence about four feet in height had to be jumped to the entrance to the pool. The paddock is now surrounded by a higher barrier, but before this could be erected the animal repeated its feat.

Some years ago a lion escaped from the London Zoo. He was followed by climbing a fence nearly six feet high, and it remained at liberty for a considerable time before it was recaptured.

A Musical House

Touch On Gadgets Produces Melody In Dentist's Home

The luxurious home of Dr. Cecil W. Nixon in San Francisco is flooded with melodies every 30 minutes, when hidden discs automatically put on the music. Each hour an old-fashioned music box bursts into melody. When a visitor presses the button, the music begins to play.

The carved door of the music room opens when it is spoken to. Dr. Nixon is a dentist, but he practices his profession only in the afternoon. He devotes his mornings to developing musical contraptions in his workshop. The music goes on 14 hours a day every day in the week.

The device are controlled by switches set in the various mechanical parts to make electric contacts.

Chief interest in the bachelor household is in a wooden image that plays a zither. "It took Dr. Nixon seven years to construct his and his mechanism."

Indian In Origin

Language Supplied Many Places In Saskatchewan With Name

Many names in Saskatchewan are of Indian origin. The name of the province itself is Indian in origin, meaning a swift current, or waterfall.

Saskatoon, sometimes thought to have been derived from the name of the province, comes from the Indian word "Saskatoon," meaning a river berry.

Similarly, Mooseman takes its name from the Indian language, "moose" meaning deer and "man" meaning berry.

Saskatoon was named by Major Walter of the R.N.W.M.P. In the Sioux language it means a knee-landed fox. To the present day there is a Fox Trail creek in the vicinity of Saskatoon.

When asked to paraphrase the sentence, "He was best on seeing her," a scholar gave the following: "The sight of her dashed him up."
